DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of claims 33-46 and bridge chains formed from amine or imine and dihalide connecting material in the reply filed on 11/19/09 is acknowledged. The traversal is on the ground(s) that all claims relate to the same technical feature. This is not found persuasive because the species of networked silica particles do not share the technical feature of particle size and functional groups.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 33,36-41,43 and 45 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Tomihisa et al US 6,683,501.

5. This patent teaches three dimensional networks of inorganic fine particles, see column 6 lines 10+. The use of silica as the fine particle is disclosed at column 6 line 22. These three dimensional networks are formed from reacting the silica with coupling agents having functional groups, See column 10 lines 10+. The functional groups as claimed and elected are identified at column 11 lines 1+ and column 19 lines 5+. Given the extensive disclosure of species falling within the scope of the claimed genus, the claims are considered anticipated. In the event the one would not immediately envisage species falling within the claimed genus, then the claims are prima facie obvious. The patent teaches functional groups falling within the claimed genus and directs one to react them onto the silica as claimed. One would be motivated to select the claimed functional compounds from the list and react them as claimed. Rejections under 35 USC 102/103 are appropriate when the reference teaches a genus which places a claimed species in the possession of the public as in *In re Schaumann*, 572 F.2d 312, 197 USPQ 5 (CCPA 1978), and the species would have been obvious even if the genus were not sufficiently small to justify a rejection under 35 U.S.C. 102. See MPEP § § 2131.02 and 2144.08 for more information on anticipation and obviousness of species by a disclosure of a genus.

6. When the reference teaches a product that appears to be the same as, or an obvious variant of, the product set forth in a product-by-process claim although produced by a different process. See *In re Marosi*, 710 F.2d 799, 218 USPQ 289 (Fed. Cir. 1983) and *In re Thorpe*, 777 F.2d 695, 227 USPQ 964 (Fed. Cir. 1985). See also MPEP § 2113.
